

KYRYLO MAZANYI

Junior Unreal Engine 5 Gameplay Engineer / Gameplay Programmer | C++ & Blueprints | Remote/CET

Nitra, Slovakia (CET) | kyrylomazanyi@gmail.com | [Itch.io](https://itch.io) | [Website](#) | [GitHub](#) | [LinkedIn](#) | [ArtStation](#) | [YouTube](#)

SUMMARY

Junior UE5 Gameplay Developer with 2+ years of focused Unreal Engine learning and 3 solo shipped prototypes. Code-first gameplay programmer focused on writing clean, maintainable C++/Blueprint gameplay logic using data-driven, interface-based, and modular architecture. Strong interest in turning design ideas into smooth, interactive gameplay systems, from prototyping and implementation to polish, UI, multiplayer-ready features, AI behavior, and animation pipelines. Targeting Junior/Intern roles in gameplay programming, gameplay engineering, generalist game programming, or technical design, where I can build, iterate, and ship playable game systems in a team.

CORE SKILLS

Engine: Unreal Engine 5.5-5.7, C++ & Blueprints, OOP, inheritance, interfaces, Actor Components

Gameplay Systems: interaction systems, dialogue/story events, teleport/projectile mechanics, upgrades, save/load, settings UI

Data-Driven Design: DataTables, Structs, PrimaryDataAssets, reusable components, modular base classes

AI & Animation: Behavior Trees, EQS, AnimBP, Motion Matching, IK

Input/UI/Rendering: Enhanced Input, UMG, CommonUI, Lumen, Nanite, TSR, lighting/performance balance

Multiplayer: Listen Server prototype, replicated projectile mechanics, multiplayer-ready upgrade systems

Programming & Tools: C++, C#, Python; Rider, Visual Studio, Git, 3ds Max, Blender, Photoshop, Unity

PROJECTS

HitInfo - Solo | Platformer/Action | UE 5.7 | Windows | 6 months

[Itch.io](https://itch.io)

- Built a 4-player co-op multiplayer prototype using Unreal Listen Server networking, with one player hosting the session.
- Implemented a multiplayer-ready, data-driven upgrade system with 10+ upgrade types and enemy bot count scaling based on active players.
- Created a replicated projectile system with teleport, damage, and multiplayer pull mechanics for dragging other players.
- Packaged a Windows build with ~140 minutes of gameplay; performance check around 130 FPS on Epic settings with TSR (RTX 5070); build size 2.33 GB.

Horror Prototype - Solo | Story Horror | UE 5.7 | Windows | 4 months

[ArtStation](#) | [YouTube](#)

- Implemented a reusable Dialogue System as an Actor Component using DataTables, attachable to any actor.
- Built a modular Story Event System with base class/subclasses for camera focus, dynamic sound, global light changes, item interactions, dialogue playback, spawning, and narrative triggers.
- Added RU/EN localization (~1,000 words) integrated into UI and narrative flow.
- Implemented Behavior Tree AI, AnimBP/Motion Matching/IK animation pipeline, and extensive settings UI.
- Packaged a Windows build with ~15 minutes of gameplay; performance check around 120-125 FPS on Epic settings (RTX 5070); build size 3.39 GB.

Alchemy Again - Solo | Puzzle | 2025 Epic MegaJam | UE 5.6.1 | Windows | 1 week

[itch.io Jam Page](https://itch.io) | [YouTube](#)

- Built a data-driven potion recipe system and cauldron/oven validation logic using Blueprints, DataTables, and Structs.
- Implemented the core interaction loop and controls with Enhanced Input.
- Delivered full audio pass, sound design, cohesive visual style, and strong lighting for a complete jam submission.
- Released a packaged Windows build with 12 potion recipes and ~10 minutes average gameplay; performance check around 130 FPS on Epic settings with TSR (RTX 5070); build size 1.08 GB.

EDUCATION

Univerzity Konštantína Filozofa v Nitre - Applied Informatics (Aplikovaná informatika), 3rd year (current)

LANGUAGES & AVAILABILITY

Languages: English B2 (Cambridge certificate), Russian native, Ukrainian native, Slovak intermediate.

Availability: Remote preferred from CET; open to Junior, Internship, and Contract formats.
